PROJECTS

Student Management System (01/2023)

- I developed a student management system that enables schools to manage student information, including personal details, fee Detail, and enrollment information. The system is designed to be user-friendly, secure, and easily customizable to meet the needs of different institutions.
- I used a combination of technologies to build the system, including JAVA, AWT & MySQL.

Library Management System (12/2020)

- Library management is made by HTML, CSS, Bootstrap. The purpose for making this website is to solve the problem faced in college libraries i.e. we don't have any idea that particular book is present or not in library. By this website it can easily access data of books availability by students as well as librarian.

My Portfolio (10/2022 - 11/2022)

- I designed and developed a responsive portfolio website using HTML, CSS, SaaS and JavaScript. The website showcases my skills and projects, as well as provides information about my background and experience.

Calculator (08/2021)

- This calculator is developed by using HTML, CSS, JavaScript. This project contains the number, operations and sign like in normal calculator. So, user can enter any number or just click on the number they want in calculate.
